Rho Generation

We rejuvenate the planet; we invigorate the future.

Supported by Cehta Capital.

We advocate for a ***Resilient Chilean Agriculture***

We integrate solar energy, storage systems, and agricultural production to restore soils, decrease CO_2 emissions, and foster a sustainable future. Our model is grounded in the principles of a circular economy and energy independence, directly influencing food security, rural development, and climate change mitigation.

Who
are we?

We are a company committed to providing renewable energy, emphasizing the promotion of the circular economy and sustainable development. Our objective is to deliver a dependable and efficient energy supply to our customers while advancing the energy transition and ensuring food security.

Javier Álvarez
Chief Executive Officer

An Electrical Engineer with extensive experience, he serves as the General Manager of Rho Generación, where he oversees complex projects and has developed over 2,000 MW. He combines his technical expertise with strategic vision to propel the company's growth and provide comprehensive solutions.

Victoria Álvarez
Administration and Finance

Professional with 14 years of experience in administration and finance. Specialized in invoicing, interactions with the Internal Revenue Service (SII), banking institutions, and treasury management. Skilled in the entry and oversight of accounting documentation, sales and purchase ledgers, as well as tax calculation and preparation.

Supported by

Cehta *Capital*

Circular Economy Investment Fund

Cehta Capital is an investment fund dedicated to advancing the circular economy and sustainable development by supporting companies and initiatives that foster a more efficient and environmentally sustainable economic model. The team possesses extensive expertise in sustainable investment and the circular economy, offering knowledge and strategic insight to facilitate the growth of its portfolio companies.

Strategic
Foundations

It combines advanced technologies with innovative capabilities in Chile, establishing itself as a leader in agroenergy within Latin America.

Advancement of regional expertise in dual agriculture-energy systems.

Efficient utilization of land through dual land use.

Business model founded on the principles of a circular economy, in accordance with the National Circular Economy Strategy 2040.

It directly benefits rural communities, creates skilled employment opportunities in various regions, and guarantees food security.

It enhances the efficiency of the panels while decreasing water consumption on agricultural land.

It diminishes susceptibility to climate change.

Business *Model*

The business model is founded on four pillars: agrivoltaic systems, circular economy, energy infrastructure, and regulatory management, all aimed at fostering sustainability within the agricultural sector.

Implementation of Agrivoltaic Systems.

The synergy between agricultural production and energy generation.

- Land use optimization.
- Optimization of photovoltaic panel utilization.
- Food production.
- Climate change resilience.

Circular Economy.

Enhancing the circular economy.

- Reduce electrical energy waste.
- Secondary application of soils in photovoltaic systems.
- Resource utilization efficiency.

Energy Infrastructure

- Expansion and modernization of electrical infrastructure.
- Advancement of energy storage systems.
- Intelligent grids.

Photovoltaics, energy storage systems, and agriculture

Regulatory Framework

- Agricultural regulations / Land utilization.
- Regulatory oversight for the integration of PV and BESS projects

Challenges in the ***Agricultural*** Sector

Agricultural producers in Chile encounter numerous challenges that hinder their productivity and competitiveness:

Variability in production resulting from climatic factors

Elevated energy expenses that affect profitability

The necessity for integrated solutions that merge energy and agriculture.

Generation and Distribution of ***Electricity***

We deliver electricity to the national grid, enhancing the sustainability and efficiency of the energy system. We offer certified renewable capacity that promotes decarbonization and diversifies the energy mix.

Agrovoltaic Energy Facilities

The project combines agrivoltaic systems and battery energy storage systems (BESS) to produce solar energy while cultivating crops, thereby enhancing efficiency and fostering sustainability. This innovative approach facilitates the optimal utilization of resources in agricultural regions.

Network Stabilization Services ***Utilizing BESS***

Grid stabilization services utilizing Battery Energy Storage Systems (BESS) function as a dynamic buffer, absorbing surplus energy and discharging it when demand rises or production wanes. This mechanism mitigates fluctuations, averts outages, and guarantees a stable, high-quality electricity supply.

Circular Economy as the Cornerstone of Business

Our model is founded on the principles of a circular economy, in accordance with the National Strategy 2040, optimizing resource utilization, reducing waste, and closing sustainable production cycles. This approach enables us to create added value from agricultural byproducts and waste.

Projects

- Maule Region, Colbún Commune, Panimávida
- 13.2 kV, Substation Panimávida
- Photovoltaics: 2.8 megawatts
- Battery energy storage: 9 megawatts
- Storage capacity: 36 MWh

- Maule Region, Municipality of Molina, Itahue
- 66 kV, Substation Itahue
- 50 MW
- 200 MWh

- Libertador General Bernardo O'Higgins Region, Municipality of Chimbarongo
- 66 kV, Substation Chimbarongo
- 20 MW
- 80 MWh

Projects

- Maule Region, Commune of Molina
- 13.2 kV, Substation Molina
- 9 MW
- 36 MWh

- Valparaíso Region, Villa Alemana, Quebrada Escobar
- 3 MW (PMGD)

- Valparaíso Region, La Ligua Commune, San Expedito
- Standalone
- 90 MW
- 360 MWh
- S/E Nueva La Ligua

Track
Record

Rho Generación takes pride in its robust strategic alliances with leaders in the energy sector and innovative enterprises, which empower it to provide comprehensive, high-quality solutions. These partnerships not only enhance our technical capabilities but also broaden our market presence, fostering the circular economy and sustainable development.
